Education

National Chung Cheng University (CCU) , Mechanical Engineering (Automation & Control) - Fully Funded Scholarship - Department: Mechanical Engineering - Program begins 1 September 2026; expected graduation 2028	Chiayi, Taiwan Sept 2026 – 2028
King Mongkut's University of Technology Thonburi (KMUTT) , Automation Engineering - Graduated September 2025 - Thesis: Natural Gas Methane Leak Detection Using an Infrared Camera - Department: Control System and Instrumentation (INC) - INC Department Outstanding Student Scholarship - Winter Semester 2023 & 2024	Bangkok, Thailand 2022 – 2025
Yangon Technological University (Center of Excellence) , Mechatronics Engineering - Participated in Myanmar RoboLeague 2019 as Mentor - Led First Global Challenge 2019 team representing Myanmar	Yangon, Myanmar 2015 – 2022

Experience

Maintenance Technology Center (MTC) - Non-Destructive Detection Technology Lab , Machine Learning Researcher (Full-Time) Developed advanced machine learning solutions for non-destructive testing applications under Prof. Cherdpong Jomdecha, focusing on acoustic emission sensor data analysis and anomaly detection. - Journal Publication (co-author): Contributed MIECT probe development and signal processing for high-speed railway defect inspection - detecting cracks as small as 0.5 mm at speeds up to 30 km/h on ferromagnetic rail steel (published in Nondestructive Testing and Evaluation) - Production Pipeline Engineering: Architected and maintained scalable ETL pipelines in Python to process high-volume acoustic emission sensor data - Workflow Automation: Optimized end-to-end ML workflows, reducing data-processing latency and accelerating model-training lifecycles through automated scripting and rigorous version control - Model Reliability & Scalability: Engineered robust anomaly-detection systems for industrial pipe inspection, focusing on reproducibility and scalable deployment in Linux-based environments - Data Quality Assurance: Implemented automated validation within the data-ingestion pipeline to ensure high-fidelity input for unsupervised clustering models	Bangkok, Thailand Sept 2025 – May 2026 9 months
--	---

Maintenance Technology Center (MTC) - Non-Destructive Detection Technology Lab,

Machine Learning Intern

Independently designed and implemented unsupervised machine learning solutions for GRP pipe inspection using acoustic emission sensor data, demonstrating strong problem-solving and analytical skills in identifying patterns from complex, real-world infrastructure data on Linux based WSL2 platform with version control via Git.

- Won First Runner-Up Award in 'Smart Infrastructure for Smart City' competition by Metropolitan Waterworks Authority
- Listed in KMUTT Hall of Fame for outstanding achievement in Smart Infrastructure development
- Applied AI/ML techniques to solve real-world infrastructure challenges

Bangkok, Thailand

June 2025 – Aug 2025

3 months

HoneyHunt.AI, Junior Machine Learning Intern / Large Language Model Intern

Enhanced automated resume parsing and intelligent job matching systems by integrating AI APIs (advanced LLM APIs), improving accuracy and scalability.

- Improved algorithm scalability and matching accuracy for production-level deployment
- Contributed to product development in AI-powered recruitment technology
- Explored Generative AI techniques to design agentic workflows for automated data processing and decision-making, leveraging LLMs and prompt engineering to optimize AI-driven recruitment solutions
- Implemented API management best practices including versioning, rate limiting, and authentication using API gateways to support reliable deployment of GenAI workflows in production environments

Bangkok, Thailand

Dec 2024 – Feb 2025

3 months

Research

Department of Control Systems and Instrumentation (INC), KMUTT, Computer Vision (Student) Researcher

Developed an optimized 3D-CNN for real-time infrared video classification achieving 99.75% accuracy in methane gas-leak detection from temporal-spatial thermal-camera features.

- Built a classical image-processing pipeline (Gaussian Mixture Models, Running Average, adaptive background subtraction) for robust foreground segmentation under varying lighting conditions
- Optimized the model for edge deployment via input-resolution scaling and quantization, maintaining 99%+ accuracy while reducing inference time by 60%
- First-authored the resulting study, awarded Best Paper at IEEE ICOT 2025

Bangkok, Thailand

June 2024 – Sept 2025

CODIA Lab, KMUTT & Panasonic Singapore, Perception (Student) Research Engineer

Developed and optimized SLAM Sparse Bundle Adjustment algorithms in C for visual odometry applications for real-time edge deployment on ARM-based embedded platforms.

- Optimized SLAM Sparse Bundle Adjustment algorithms for edge devices, improving computational efficiency and enabling real-time performance in resource-constrained environments

Bangkok, Thailand

Feb 2024 – July 2024

COSIN Lab, INC Department, KMUTT, FormulaStudent Vehicle Control Student Researcher

Developed ROS2-based autonomous navigation systems integrating IMU and camera sensor fusion for competitive robotics applications.

- Implemented the micro-ROS framework on microcontrollers for real-time IMU data acquisition and sensor synchronization, achieving sub-10ms latency for control loop feedback
- Performed sensor calibration including IMU bias estimation and camera extrinsic alignment to improve localization accuracy in dynamic environments

Bangkok, Thailand

Nov 2023 – Feb 2024

Volunteer

FIRST GLOBAL CHALLENGE 2019, Mentor

Provided technical guidance and strategic mentorship to Myanmar national robotics team, fostering knowledge sharing through structured training sessions and collaborative problem-solving.

- Led team to win Judges Award at international robotics competition
- Fostered STEM education and international collaboration in robotics

Dubai, UAE

June 2019 – Oct 2019

Laboratory of Robotics and Artificial Intelligence (L.O.R.A), Robotics Researcher and Founder

Founded and led comprehensive robotics research laboratory focusing on practical applications.

- Spearheaded development of autonomous disinfection robots during COVID-19 pandemic in Myanmar
- Managed multiple concurrent research initiatives and mentored junior researchers
- Managed cross-functional communication between engineering teams, public health stakeholders, and external partners to align technical development with societal needs during the pandemic

Yangon, Myanmar

Dec 2019 – June 2021

ConceptX International School, Head of Department and Instructor of Robotics and Computer Science

Instructed Computer Science and Robotics to approximately 200 students from Upper Primary 5 to Lower Secondary 2.

- Promoted to Head of Department in October 2021
- Taught IGCSE Computer Science to Secondary 3 students

Yangon, Myanmar

June 2021 – Dec 2021

Awards

Best Paper Award - IcoICT 2025 (IEEE Xplore)

Co-winner with Asst. Prof. Dr. Sarawan Wongsu

13th International Conference on Information and Communication Technology, Bandung

July 2025

Best Presentation Award - ICA-SP Con 2025

16th Instrumentation, Control and Automation Senior Project Conference

Apr 2025

First Runner-Up - Smart Infrastructure for Smart City Competition

Metropolitan Waterworks Authority, Bangkok

July 2025

KMUTT Hall of Fame

King Mongkut's University of Technology Thonburi

July 2025

INC Department Outstanding Student Scholarship

KMUTT - Control System and Instrumentation Department

2024

INC Department Outstanding Student Scholarship

KMUTT - Control System and Instrumentation Department

2023

Judges Award - First Global Challenge 2019

International Robotics Competition, Dubai, UAE

first.global/2019-nations/myanmar-2019

Oct 2019

Publications

Development of high-speed inspection technique based on motion-induced eddy current testing for surface railway defects

Co-author - contributed MIECT probe development and signal processing. Q1-ranked journal (Web of Science, JCR) publication on a high-speed motion-induced eddy current testing technique for detecting surface railway defects, developed with the Maintenance Technology Center (MTC), KMUTT. DOI - 10.1080/10589759.2026.2638558

Optimized 3D-CNN for Real-Time Infrared Natural Gas Leak Classification

First author - developed a high-accuracy (99.75%) 3D CNN model for methane gas leak detection using infrared imaging. Winner of the Best Paper Award. DOI - 10.1109/ICoICT66265.2025.11192973
